Applications of AI methods in mainstream statistics

Wing-Hung Wong

Department of Statistics, Stanford University, U.S.A.

Abstract

Historically, statistical methods have been instrumental in the development of modern AI. Conversely, intense investments in AI research in recent years have led to many novel models and algorithms that should be useful for statistical research. In this talk I will discuss some examples of how advances in AI can benefit mainstream statistical areas such as Bayesian computation, density estimation and causal inference.
