

An Introduction to Utility-Maximizing Credit Scoring

Jiun-Hua Su

Institute of Economics, Academia Sinica

In this talk, we will start by reviewing some common statistical and machine learning methods in credit scoring. After the review, we will discuss the connection between statistical accuracy and business value. Equipped with the background knowledge, we then move on to the maximum utility framework and study methods of model selection and variable selection in this framework. Finally, we will apply these methods to credit scoring.
