Advanced in Reliability (AIR) Workshop

### **Abstract**

In this presentation, I will share my work experience in the field of industrial statistics. First of all, I would like to introduce the background of my research career in industrial statistics. Next, I will put more emphasis on my experience with industry collaborations (which I feel statisticians can easily engage in) and the corresponding benefits of translating these research projects into journal articles. Finally, I will share some of my experience as an associate editor (AE) of handling the submitted manuscripts. To be more precise, I think the 3Cs (Clarity, Correctness, and Contribution) should be the key issues to ensure that a submitted paper is publishable or not.
