Fields of specialty (limit to fields related to research)

Prof. Liu's research is in the field of Social Gerontology. Based on her discipline of Social Policy and Management in Aged Care, her research explores the long-term care policy and service delivery/outcomes, and also innovation of the aged care models in Taiwan. Among aging in place and long-term care policies, her recent research centers on the combating ageism, enhancing quality of life of elderly people by deferential aging and person-environment interactions, including integration of social care into health care system; self-perception of aging and place attachments, autonomy and intrinsic capacities of elderly people.
